Pollinator Efficiency in Action: The Mason Bee Model

Presented by

**Anne Bulger, WSU Master Gardener and OSU
Master Melittologist**

Welcome spring by inviting one of nature's most efficient early-season pollinators into your backyard — the Mason bee. Join us to learn how to create a welcoming habitat, from choosing the right nesting materials to providing essential habitat. You'll also discover best practices for caring for Mason bees from spring through fall so they can return year after year. With a little preparation, you can enjoy a thriving garden while supporting these remarkable native pollinators

Note: We will also be selling (cash/check only) and distributing cocoons (to Nov.'25 class attendees) after the presentation portion of the session.

**Class Location: CASEE Center, Building B, Room 205
11104 NE 149th Street, Brush Prairie, WA. 98606**

Day/Time: Saturday April 11, 2026 10:00 am-noon

Fees: Naturescaping members free or \$15.00 (+ tax) for non-members. Membership per year is \$25.00 (\$15.00) for seniors.

****Registration required for class or for more information:**
